

Cross Beams

The cross beams are the strongest on the market. The beam ends are manufactured in Stainless Steel and the beams are supplied in 25.4mm aluminium tube.

As standard we offer the cross beams in 1.2m, 1.5m, 1.8m and 2.0m lengths, although as the tube is cut to size in house, we can manufacture them at any length.

Our products are produced using a turning process rather than a much weaker casting process that many competitors provide.

They are attached using stainless steel fasteners to avoid corrosion. A patented trigger mechanism is provided on each beam end which ensures accidental release is avoided.
